At my work, we keep inventory of all equipment for the customer's we support in the states. Excel files can go so far when telling us when certain equipment is do for calibration. I want to design a program that tracks when equipment is do for calibration, & will notify the user 2 weeks before its due so the proper calibration can take place.

Rough Draft/Sketch

Individual Text Boxes

Name	P/N	S/N	Location	Due Date	Days until next Cal

Save Exit ADD

Needed: Properties.

- Buttons
- Month Calendar
- Data Grid View that integrads numerous text boxes.
- Ability to add another row that can be populated by the columns info. ie, P/N, S/N, Part name etc.
- Display Message Box when equipment is exactly 2 weeks from being Due
- Clock
- Labels
- Vertical Scroll & Possible Horizontal Scroll.
